

**Anderson Township Park District**  
**Ball Diamond Repair**  
**Re-Certification Sheet**  
**2010**

We appreciate your willingness to get re-certified to repair ball diamonds! The following information will refresh your memory regarding proper ball diamond repair methods; please keep this page with you as a reference whenever you attempt to repair a field.

Once you have read the information thoroughly, complete the attached form online at AndersonParks.com, or complete this form and return to the ATPD (Juilfs Park, 8249 Clough Pike, Cincinnati, OH 45244) by April 9, 2010. Your new ID will be mailed to you within two weeks of the ATPD's receipt of your completed form.

**Remember, a certified individual must be present for all repairs or work done to any Anderson Township Park District field! The current certified individual IS RESPONSIBLE for the field repairs, regardless of who actually does the work, and they must carry the Field Certification ID with him/her while working on a field.**

**Examples of past poor field repair practices:**

- 1) Adding mortar mix, topsoil, and/or mulch to diamond dirt in attempt to dry the field;
- 2) Adding soil dug out of turf areas to the diamond dirt;
- 3) Dragging fields with vehicles;
- 4) Pouring gasoline on infields with the intention of lighting them to dry the field.

**What is the infield mix consistency of ATPD fields?**

The ATPD purchases a special blend of ball diamond dirt comprised of silt, clay, and sand. Adding other materials changes the mixture, thus negatively affecting the drainage and playability of the field.

**How many games and practices does each field average per season?**

196 events scheduled per field.

**Deciphering the ATPD Hotline field condition messages prior to maintenance:**

**Always check the field status hotline: 513-357-6629 x3**

If it has rained, the Hotline message will contain one of these phrases:

Wet – Standing water

Muddy- When mud clings to shoes, causing deep, damaging footprints.

Tacky – When mud partially, or lightly clings to shoes.

**Note: The decision to play or not to play is ultimately determined by each league supervisor.**

**Things to consider before working on a ball field:**

1. What is the air temperature? A 90-degree temperature dries a field faster than a 40-degree temperature.
2. What kind of rain did we have? Was it a fast, intense rain, or a slow, soaking rain? Fast intense rains generally run off the field; slow, soaking rain is usually absorbed in the soil.
3. What are the sunlight conditions? Obviously, on sunny days, fields will dry quicker than on cloudy days.

**Field preparation after rain:**

- 1) Step on diamond dirt area to see if you sink into the surface or if you can walk without sinking. If you sink, immediately vacate the field and let it dry. If you have diamond dirt clinging to the soles of your shoes, let the field dry. These conditions indicate that the field is saturated and needs the wind, the sun's heat, and time to dry in order to become playable or even to work on it.
- 2) If you can walk on portions of the field without diamond dirt clinging to shoes, it's okay to proceed with work on the field to improve the field conditions.
- 3) Concentrate on limited areas, not the whole field.

**DO NOT, AT ANY TIME, REMOVE DIAMOND DIRT FROM THE FIELD AND PLACE IN GRASS AREAS.**

**Removing Water:**

- a) Dig a hole 8" to 10" in the lowest spot of a puddle.
- b) Cup or bucket out the water.
- c) Use blower, pump, or sponge to remove small water areas.
- d) Use a pump and larger bucket or cart to remove large amounts of water.
- e) Rake diamond dirt to allow the elements (sun, wind, and humidity) to assist with evaporation.
- f) Incorporate Diamond Dry, Rapid Dry, Turface, 100% Clay Based Cat Litter to help absorb the moisture. **(NO SAND)**
- g) Rake in with sturdy rake and then leaf rake to break up clods.

**After the game:**

Please rake dirt into batters boxes, pitchers mound (area) and sliding spots on the base lines.

**Approved Tools:**

Small Garden Shovel	Squeegee
Bow Rake	Leaf Blower
Leaf Rake	Hand or Gas Water Pump

**Approved Amendments:**

Turface	Diamond Dry
Rapid Dry	100% Clay Cat Litter (No Fragrance)

**DO NOT USE:**

Mortar Mix	Peat Moss
Concrete Mix	Gasoline or Diesel Fuel
Sand of any Kind	Top Soil
Mulch	

The best tool, of course, is Mother Nature. Work with her, not against her.

**THANK YOU FOR YOUR HELP AND ENJOY YOUR SEASON!**
